Load Capacity of Nitto® NT05R™ Tires

Nitto Tire U.S.A. Inc. is introducing the following sizes in the NT05R Drag Radial product line that are designed using the Light Load (LL) standard of the Tire and Rim Association (T.R.A.);

- P275/40R17 93 LL
- P315/35R17 93 LL
- P285/40R18 96 LL
- P305/45R18 103 LL
- P315/40R18 102 LL
- P345/30R19 98 LL
- P315/35R20 97 LL

Load Identification
Under the T.R.A.’s designation, tire load is divided into three categories: Light Load (LL), Standard Load (SL), and Extra Load (XL). Each refers to the tire’s ability to carry a certain load at a given air pressure. Tires designed for LL, SL, XL duty are usually identified as such on the sidewall.

CAUTION! A Light Load tire carries less load at the same inflation pressure as a standard load tire and has a lower maximum load capacity than the equivalent standard load size. Figure 2 below shows the different load capacities of the three different categories of tires of the same size.
General Advice for Determining Correct Inflation Pressure:
“Plus size” tires, including subject tires, may require higher inflation pressures than what is indicated on the vehicle Tire Information Placard or in the vehicle Owner’s Manual. Any “plus size” tire should be inflated to a pressure that provides equal or greater load capacity compared to the original equipment (O.E.) tire. Always refer to tire industry load & inflation tables to determine correct inflation values when installing “plus sizes”, or contact Nitto tire for assistance.

**WARNING**

Always observe this advice to avoid overloading the tire. Tire overload will contribute to tire fatigue and could lead to tire failure. Tire failure may lead to an accident, which may result in injury or death.

Single Load per tire in pounds:

<table>
<thead>
<tr>
<th>Size</th>
<th>Tire Load Limit at Various Cold Inflation Pressures</th>
